## **AMENDMENTS TO THE CLAIMS**

Applicants request amendment of claim 7 as follows. Applicants request cancellation of claims 15 and 16. The listing of the claims will replace all prior versions, and listings, of claims in the application:

- 7. (currently amended): A method for vaporizing a liquid or solid sample for analysis, comprising:
  - a) providing a micropyrolyzer, comprising:
  - a substrate having a suspended membrane formed thereon, the membrane having a surface for accepting the sample, wherein the substrate is selected from the group consisting of semiconductors and dielectrics; and
    - a resistive heating element disposed on the membrane;
- b) depositing the sample on the sample-accepting surface of the membrane, and wherein the sample comprises a fatty acid or a mixture containing fatty acids;
- c) introducing a reagent chemical to the sample, wherein the reagent chemical comprises a methylation reagent;
- d) heating the sample on the membrane with the resistive heating element to form a vapor; and
- e) removing the vapor from the micropyrolyzer for chemical analysis of the vapor.

- 8. (canceled)
- 9. (original): The method of claim 7, wherein the sample size is less than 3 microliters.
- 10. (original): The method of claim 7, wherein the sample heating rate is greater than 20°C per millisecond.
- 11. (original): The method of claim 7, wherein the sample heating rate is greater than 40°C per millisecond.
- 12. (original): The method of claim 7, wherein the sample heating rate is greater than 60°C per millisecond.
- 13. (original): The method of claim 7, wherein the sample can be heated to a temperature of up to 1000°C.
- 14. (original): The method of claim 7, wherein the heating requires less than 1 Watt of power.
- 15. (canceled)
- 16. (canceled)
- 17. (canceled)
- 18. (currently amended): The method of claim 47, wherein the reagent chemical comprises tetramethylammonium acetate, trimethylphenylammonium hydroxide, phenyl-trimethylammonium fluoride, N,N-Dimethylformamide dimethyl acetal, or (m-trifluoro-methylphenyl) trimethylammonium hydroxide.
- 19. (currently amended): The method of claim 47, wherein the reagent chemical comprises tetramethylammonium hydroxide.
- 20. (canceled)

  31. (canceled)
  32. (canceled)
- 33. (canceled)
- 34. (canceled)
- 35. (previously presented): The method of claim 7 wherein the substrate comprises silicon.
- 36. (previously presented): The method of claim 7, wherein the membrane comprises a material selected from the group consisting of silicon nitride, polysilicon, silicon oxynitride and silicon carbide.
- 37. (previously presented): The method of claim 7, wherein the resistive heating element comprises a circuitous metal trace.
- 38. (previously presented): The method of claim 37, wherein the metal comprises a metal selected from the group consisting of platinum, molybdenum, titanium, chromium, palladium, gold, tungsten, and combinations thereof.
